ONLINE GROCERY DELIVERY SYSTEM

Yamil Diaz

ABOUT US

The Online Grocery Delivery System allows customers to order groceries online and have them delivered to their homes. The system connects customers, store managers, and delivery staff through one platform. Customers browse items, place orders, pay online, and track their deliveries in real time. Store managers manage product listings and inventory, and delivery staff update delivery statuses.

The image displays two screenshots of the online grocery delivery system interface. The top screenshot shows the 'Checkout & Pay (UC4)' page. It features a navigation bar with links: Login, Sign Up, Shop, Cart, Checkout, and Track Order. The main content area has a 'Delivery Address' field with the value '123 Main St', a 'Card Number' field with the value '1111 2222 3333 4444', and a 'Confirm Payment' button. Below the button, a green message states 'Payment successful! Your Order ID: 1'. The bottom screenshot shows the 'Track Order (UC5)' page. It also has the same navigation bar. The main content area has an 'Enter Order ID' field with the value '1' and a 'Track' button. Below the button, a green message states 'Current Status: Out for Delivery'.

FEATURES

Sign up or Log in

Customers securely create accounts and access dashboards

Browse Products

View categories, apply filters and search items easily

Add to Cart / Checkout

Add products, confirm details, and pay using credit/debit cards

Track Orders

Follow delivery progress from Confirmed to Delivered.

Manage Products

Managers can add/edit/remove products and monitor orders

Update Delivery

Staff can mark pickup, delivery, and notify customers in real time

SYSTEM BENEFITS

Saves time for busy customers and supports those with mobility issues

Provides real-time order tracking and reliable delivery updates

Streamlines inventory and order management for store managers

Uses modern technology stack (React.js, Django, MySQL, Stripe, Google Maps API)
